NMC-OKFP-SL-1U-BK

Optical organizer 19 ", metal, with plastic guides, black

Optical organizer is used to put the stock of optical cable or patch cords in 19 "cabinets and racks, and it has a standard mount. The organizer is black and comes pre-assembled in an individual box. The organizer body allows you to put the bending optical cables inside (Permissible bending radius of the fiber).

The cables are laid inside the organizer through plastic guides.
The sliding chute on telescopic guides reliably protect the laid cable from mechanical damage, and plastic clips securely fix it in closed position. Cables can lead to or lead from left or right of the panel. Plastic and rubber protective spacers at the inlet and outlet protect it against cable damage.
