

NMC-RP24SD2-HU-MT

Shielded patch panel, 24 ports, 19 ", 0.5U, Category 5e

Shielded Patch Panels are designed for connecting different SCS subsystems and network equipment to each other with patch cords.

NIKOMAX NMC-RP24SE2-HU-MT (Cat.6) and NMC-RP24SD2-HU-MT (CAT5), high-density panels are made of steel, fully shielded housings and designed for installation in 19" cabinets and racks. These panels contain 24 port RJ45 / 8P8C at a height of only 0.5 U. This solution is ideal to provide a high port density need (e.g., data centers) or to extend the network in the limited space of the cabinet. Universal IDC contacts for 110 / KRONE type knives are located on the rear side of panels . The panels offer two wiring standards: T568 A and B.

Shielded cable are grounded in pairs on the screw terminals. The cassette provided the 9th ground to IDC-contact - specifically for the drain wire of the cable which both sides of the PCB have a common ground bus. For better shielding against electromagnetic interference and improve communication with unpainted rails cabinet, steel body panels are galvanized with nickel. A built-in organizer for secure fastening of cables.
