

## NMC-TE100PF

NIKOMAX cable tester,  
UTP/STP, RJ11, RJ12, RJ45, with  
PortFlash function and LED

✓ Universal solution

✓ Port Flash feature

Cable LAN testers are designed for field testing of the cable network for proper wiring and cable line integrity.

The NIKOMAX NMC-TE100PF cable tester is designed to work with twisted pair cables, terminated RJ45 connectors and telephone cables with RJ11 connectors. The tester is able to diagnose such line errors as violation of the wiring layout of wires, open wires and short circuits.

The tester is equipped with the “port flash” function, which allows you to determine the port of active equipment to which the cable is connected by simultaneously indicating LED-LEDs on the tester and the port of active equipment, and the LED flashlight on the main unit of the tester allows you to work in poorly lit rooms.

NMC-TE100PF

### Basic equipment:

Tester(basic and remote modules )	1 pc.
Fabric case	1 pc.
User manual	1 pc.

The manufacturer reserves the right to change the appearance and characteristics of the product, without reducing its consumer properties

### Specefication

Vendor Code	NMC-TE100PF
Type of test cables	LAN UTP/STP, Tel.
Ports	RJ45, RJ11/RJ12
Test Modes	Normal/slow
Testing layout	Yes
Breakage detection	Yes
Check on line breaks and short-circuit	Yes
Checking the integrity of the screen	Yes
Identification of the active equipment port	Yes, «PortFlash»
Light	White LED
Material	Plastic
Power	9V battery «Krona» type (not included)
Max. length of tested cables	300 m
Maximum allowable mains voltage	60 V
Temperature ranges	Storage -20 to +40° C. Operating from -10 to +40° C
Color	Black
Warranty	1 year
Packaging	Carton box

### Order table
