- ✓ Ability to work in three pairs (RJ45 / 8P6C connectors)
- ✓ Grounding

Patch panels are designed to cut cables in various subsystems of the SCS and connect the individual components of the network to each other with patch cords.

The NIKOMAX **NMC-RP50UC3-1U-BK** telephone patch panel is designed for mounting in a 19" cabinet or rack. With a standard height of 1U, the panel holds 50 Category 3 RJ45 / 8P6C ports, which saves space inside the cabinet.

Unlike most telephone panels, the **NMC-RP50UC3-1U-BK** supports three-pair operation, which is necessary for the operation of certain types of digital PBXs. For ease of administration, all ports are numbered, and there are additional marking sites.

The patch panel is made in the classic black color. Universal IDC contacts 110 / KRONE are located on the back side of the panel, on a horizontal substrate. This design makes it much more convenient to distribute multi-pair cables. The patch panel is made according to the USOC standard. For fixing the cables has a built-in organizer.

* Additional photos and dimensional drawings of the patch panel can be found on page 3.
